

Removing all DateBk style tags from the Appointment Database

NOTE: while this routine appears to perform properly, there is always the potential for some new error condition to arise where it will not function as expected. You are strongly encouraged to hotsync and then make a backup copy of your desktop data now before invoking this routine in case some problem arises in the removal of all the tags.

-1-

In any view, tap on menu button and select Preferences from the Options Menu.

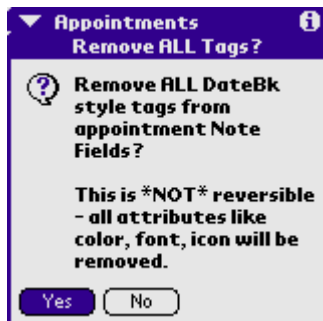

-2-

Tap just to **left** of (i) symbol in title bar or tap the Menu button.

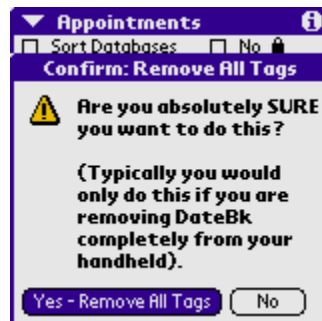

-3-

Select **Remove All Tags** from the **Options** Menu.

-4-

Tap on **Yes** button to confirm that you want to remove all the tags.

-5-

Tap on **Yes—Remove All Tags** button to confirm **again** that you really want to remove all the tags.

-6-

After a few seconds, DateBk6 displays number of records that had tags removed. Tap on OK button and exit DateBk6.
